LETTER TO BE SENT TO PYDRAUL DISTRIBUTORS

Dear Sirs,

You may be aware that there is information that certain products, namely polychlorinated biphenyls (PCBs) have been discovered at some points in some marine, aquatic and wild life environments. Recent information suggests PCBs may be accumulating in the environment. A copy of an article published in 2oth November 1971 issue of "Chemistry and Industry" is enclosed, which gives some background to the situation as it has developed.

Pydraul 90, 135, A-200, 230, 280, 281, F-9, 312, 540, 525, AC, AC-WG contain PCB and because of Monsanto's concern over the pollution problem we have decided to stop supplying these products as from the date of this letter. This decision has been taken to avoid the problems that could well occur should there be accidental leakages of Pydraul. Monsanto is taking this action only after very careful consideration of the whole question of environmental pollution and believes this decision is in the best interest of all its customers using these products.

We very much regret any difficulties this decision may cause you, but feel you will agree that Monsanto, in taking this course of action, has made the correct decision.

Yours faithfully,

MONS 087897
