Q Okay. I am just about done with direct, Mr. Anderson, but I would like to ask you about replacement parts, and specifically replacement friction parts.

Based upon your experience as a mechanic and your career at Ford, is there any requirement that a mechanic who services a vehicle use Ford replacement parts, either brake or clutch parts merely because the vehicle that he is servicing is a Ford?

A None whatsoever.

Q In your experience as a mechanic and based upon your time at Ford, can you say whether it is common practice for mechanics to use other companies' replacement parts on Ford vehicles?

A It is generally known that replacement parts in the United States or in North America are about 85 percent not from the original manufacturer.

About 15 percent are original Ford parts or manufacturer's parts.

Q So is there a separate replacement part industry?
