ANOX-C

...meets requirements for high quality interior paint

A high quality flat wall paint must be formulated with special attention to the following characteristics: Workability, consistency, levelling, drying, control of sheen, suspension, cost, color, type of vehicle, high non-volatile content, resistance to after yellowing, high light reflective value and aquatic. Titanox-C (Calcium Base) is recognized as the ideal pigment for flat wall paints and formulae which develop the optimum of the above qualities have been worked out with it. Such formulae require little or no grinding and are very economical. Helpful information will be furnished upon request.

MANUFACTURERS ARE GETTING WHITER PAINTS AT LOWER COSTS WITH . . . . . .

TITANOX-B

Many paint manufacturers, seeking to improve their products and at the same time to reduce costs, have discovered in Titanox-B the ideal pigment. They have found that the modern pigment not only produces the whitest paints ever made . . . but that Titanox paints retain their whiteness through years of service.

When you combine exceptional whiteness and chemical stability with other well known features of Titanox-B . . . . high hiding value, extreme particle fineness, high hiding power, ready mixing qualities and moderate price . . . . you have sufficient reasons for the fast growing popularity of Titanox-B. Alert manufacturers realize that with all these desirable properties, it is logical that Titanox-B paints should appeal to paint buyers everywhere.

Ask us to assist you to adapt Titanox-B to your paint formulas. Write for detailed information and prices.

TITANIUM PIGMENT CO., INC.

CONSIDER THE NEW LOW PRICES ON . . . . . .

TITANOX-C

Recent price reductions on Titanox-C (titanium base) provide an exceptionally important reason why paint manufacturers should study the various ways in which this modern pigment will reduce costs and at the same time improve quality.

Users now appreciate that Titanox-C saves grinding time. Because of its dispersive properties, it shortens the manufacturing operations. In many instances grinding has been entirely eliminated by using Titanox-C.

Here are other important reasons for adopting Titanox-C. It has high hiding value . . . exceptional hiding power . . . and the high degree of whiteness so essential to quality paints. The fast growing popularity of Titanox-C is ample proof that this economical pigment makes paint that meets the demands of the shrewdest buyers.

Write today for new low prices on Titanox-C. Full information will be gladly furnished without obligation.

Paint records like this...

keep customers sold on

DUTCH BOY

● Four years of sun and rain ... four years of summer heat and winter cold ... time and weather haven't destroyed the protective film of this Dutch Boy White Lead paint job. Although the paint on this clapboard surface shows some signs of weathering, there is no evidence of cracking or scaling. There will be no need for a blow torch and scraper at repaint time. Here's a rebuttable proof of Dutch Boy's weathering quality ... of Dutch Boy's performance?

For years and years, property owners and painters have known that paint made with Dutch Boy White Lead wears a long time and affords excellent protection. They know that Dutch Boy won't crack and scale ... that it wears down smoothly by gradual chalking ... that this long-wearing paint doesn't require expensive burning and scraping.

Look at this typical four-year paint record if you want to know why 8 out of 10 painters use Dutch Boy.

Dutch Boy is sold in both heavy and soft paste ... in 12½ [illegible] pails and 100 lb. kegs.

Someone thought he was getting a CHEAP *paint job!*

NOTICE: If the film image is less clear than this notice, it is due to the quality of the document being filmed

DUTCH BOY...after 4 years

He won't stop paying for this paint job

...until he pays for burning it off!

● Take a look at the upper photograph which shows a "cheap paint" job after four years' exposure to the weather. Notice how the paint has gone to pieces — how it has cracked and scaled — how moisture has gotten in and split the wood.

The man who bought this paint job thought he was getting a bargain. But any way you figure it, he will stop paying for this "cheap paint" job only when he pays for burning it off. It's going to cost this property owner real money to put the surface in shape for repainting.

Now look at the lower photograph and observe how good the Dutch Boy job is after four years of weathering. The wood is still completely protected. There will never be any need to burn or scrape off this paint. The gradual chalking has left a perfect surface for repainting. What other paint can equal this record?

● This story of how a Dutch Boy job outwears a "cheap paint" job is the keynote of Dutch Boy advertising in 1932. National magazines, such as The Saturday Evening Post and Collier's, are bringing this convincing evidence to millions of property owners.

Incidentally, these photographs tell why good painters everywhere prefer pure white lead paint...why 8 out of 10 painters use Dutch Boy.

DUTCH BOY *gives a quality paint job*

● Paint intended for apartment, office building or hotel service must stand up under repeated cleaning, and still keep a fresh and pleasing appearance. In this respect, Dutch Boy White-Lead paint has no superior. It can be washed again and again.

But that's only part of the story: You can use Dutch Boy everywhere...to make paint for wood, plaster, wall board, masonry or metal, as well as to produce flat or egg-shell finishes for interiors...gloss paint for outside use... undercoatings for enamels...plastic finishes.

Furthermore, you achieve the exact color effects you want by using Dutch Boy. With this pure white-lead, the necessary thinners and tinting materials, your painter will find it quick and easy to obtain the precise tints you may specify.

"The Decorative Possibilities of Paint" is a useful booklet that should have a place in your files. If you have not [illegible], just send your request to our nearest branch.

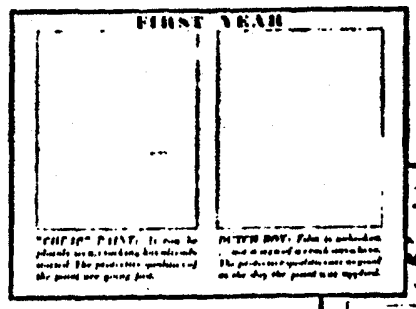
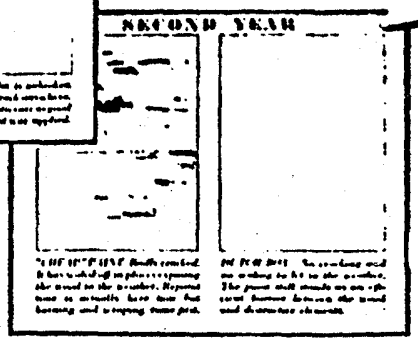
Camera explodes

PAINT IDEA FOR ALL TIME!

It took four years to prepare this advertisement. Take four minutes to study it.

Two paints...one of them Dutch Boy White-Lead...the other a "cheap" paint...applied in the same manner . . . exposed to the same weather conditions . . . and, now, after four years . . . here's the story of the two paints told by the camera in unaltered, untouched photographs. Study these photographs carefully. They speak far more eloquently than words.





NATIONAL LEAD COMPANY

PAINTERS IN EVERY USE DUTCH BOY

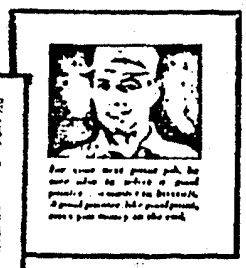
NOTICE: If the film image is less clear than this notice, it is due to the quality of the document being filmed

IDEA

ME!

...antes to study it.

...ap" paint...applied
... and, now, after
...era in unaltered,
...y speak far more



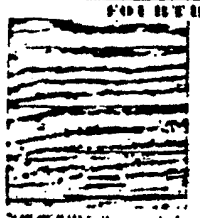
For your next paint job, be sure also to select a good painter ... a master in his craft. A good painter, like good paint, saves you money in the end.

THIRD YEAR

"CHEAP PAINT Cracking and scaling of the paint has been followed by cracking of the wood. Damage the expense of painting this surface back into shape for repainting."

OF TOMBOY Paint still protecting surface. No cracking, no scaling. Wearing down gradually, no paint should be gradually chalking.

FOURTH YEAR



"CHEAP PAINT Almost completely gone. Wood badly split in many places. Mated responsible to repair. Now "cheap" paint is expensive!"

OF TOMBOY Weathered, of course, but paint still in good shape ... still giving protection. No burning and scraping here at repaint time.

There's the picture story of two paints, told in four convincing chapters. But it's a story with a climax that can only be told in figures. It is this: If the "cheap" paint cost, say, $250 applied, its yearly cost based upon two years of life would be $125. If Dutch Boy White-Lead, applied to the same job, cost say $270, its yearly cost based on the four years of life illustrated here would be $67.50...a saving of $230 in paint costs for these four years alone...an additional saving of $125 for every year beyond four. Moreover, you also save on Dutch Boy because it doesn't require burning and scraping at repaint time.

BOY WHITE LEAD AND NO ONE KNOWS PAINT LIKE A PAINTER

This advertisement appears in the following publications:

Collier's Weekly, May 7
The American Magazine, June
The Saturday Evening Post, May 14
Better Homes and Gardens, June

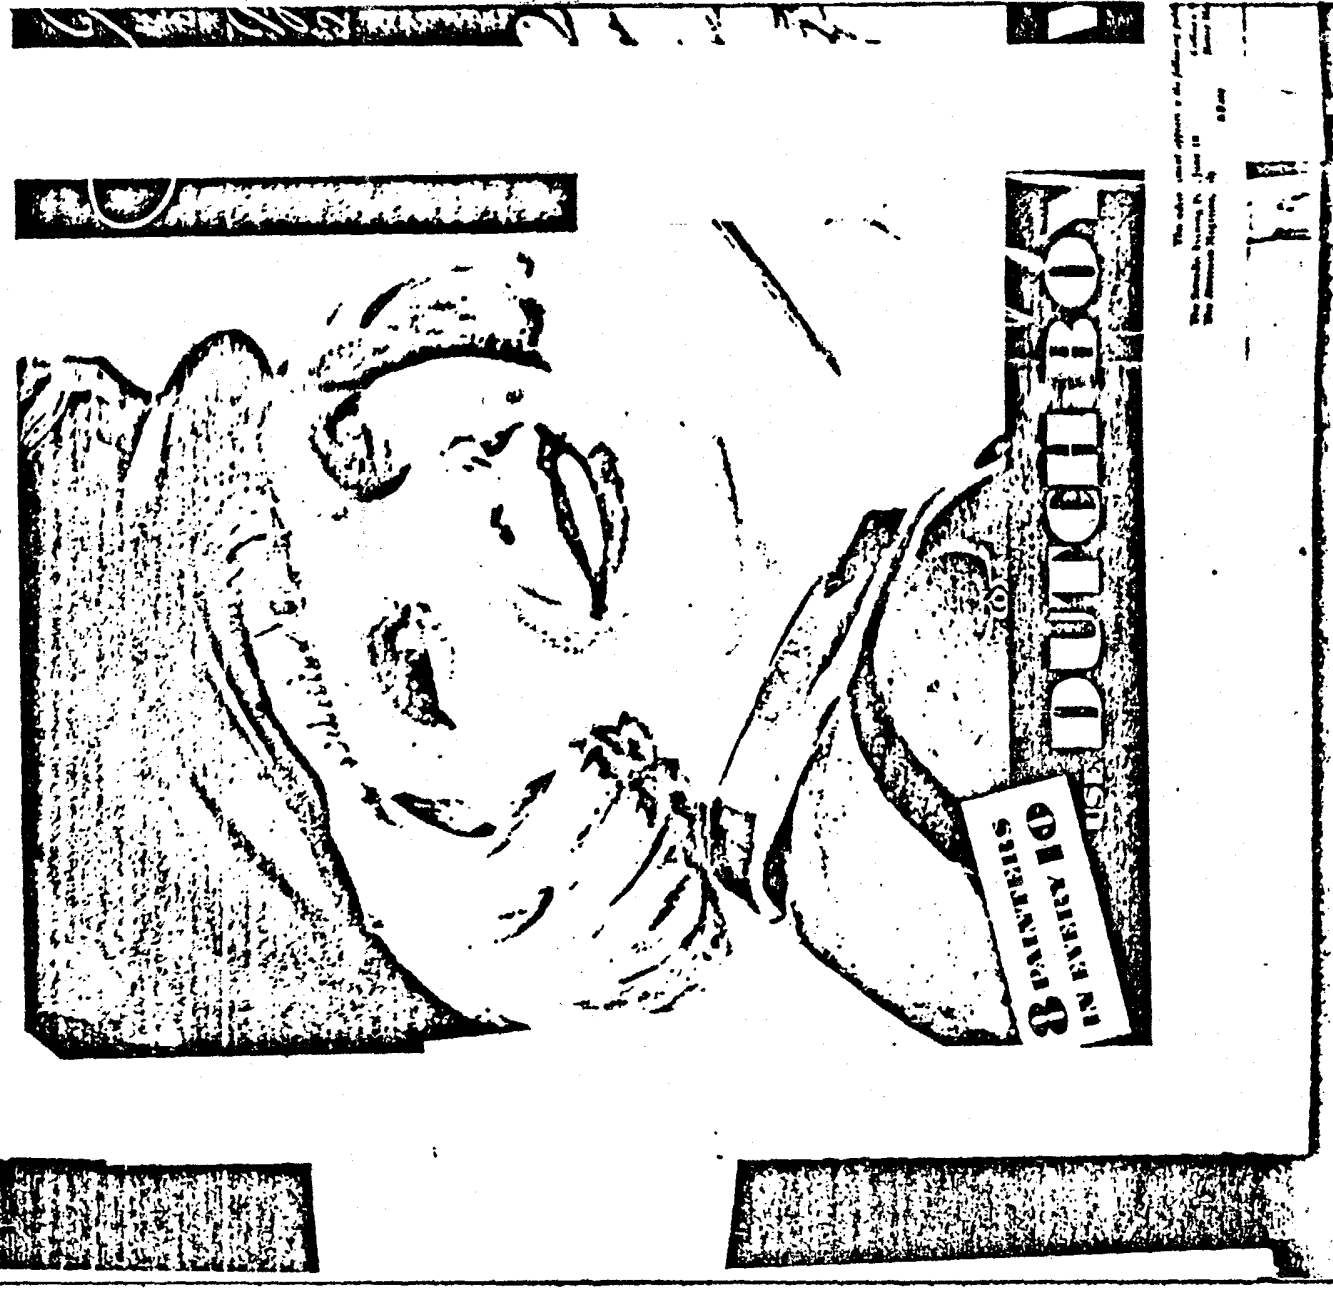
00048

NLI 104258

NOTICE: If the film image is less clear than this notice, it is due to the quality of the document being filmed

NLI 104259

00048



NOTICE: If the film image is less clear than this notice, it is due to the quality of the document being filmed

00048

NLI 104260

If a "cheap" paint job costs $250 and lasts 2 years that's $125 a year

If a Dutch Boy job costs $270 and lasts 4 years* that's 67.50 a year

Saving for 1 year 57.50

Saving for 4 years $230.00

* Just most paint-money [illegible] for 4 or 5 years

The mistake the user of "cheap" paint makes is in thinking of paint simply as a commodity instead of as a service. You can't judge a paint's real cost by the amount you pay per gallon or per job. It's the service it gives . . . the way it lasts . . . that counts.

A Dutch Boy paint job, for example, may cost slightly more than "cheap" paint in the beginning. It always costs less in the end. For in addition to the dollars and cents saving so graphically shown above, Dutch Boy effects another important economy. Dutch Boy does not crack or scale and therefore does not require burning and scraping, a very expensive operation, at repaint time. Dutch Boy grows old gracefully through gradual chalking. It actually *prepares itself* for repainting!

Next repaint time select an established paint and specify Dutch Boy White Lead. A good paint, you know, is quite as essential as good paint. From Dutch Boy White Lead, he will mix the paint for the particular requirements of your job . . . even for the different exposure conditions encountered on the different sides of your house. And, as the paint is mixed to order, he can give you the exact colors you want.

[illegible] can make reception rooms bright and fresh as a June morning . . .

● This hospital reception room has been made cheerful and inviting through the effective use of colors that are reminiscent of a spring morning. With the help of these pleasant tints, this room is sure to make a favorable impression on visitors.

However, reception rooms represent only one of a hospital's decorative problems. It must be remembered that every room or department in a hospital requires individual color treatment. Combinations of certain greens have been found effective in producing a beneficial effect on convalescents. Reds and yellows may sometimes be used in the rooms for other types of patients.

The selection of the correct colors for any hospital room is a matter for careful study. Individual conditions must always be weighed. For instance, the size, lighting, exposure and, of course, the use and purpose of the room are all important considerations.

Over a long period, our Department of Color Research and Decoration has thoroughly studied the proper use of color in hospitals. This department will gladly cooperate with hospital officials, superintendents and architects in preparing effective color treatments for any hospital room or an entire hospital. This helpful consultation service is rendered without cost or obligation. Just address Department of Color Research and Decoration care of our nearest branch.

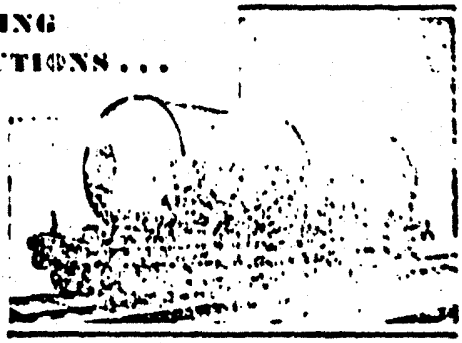
IN HANDLING
ACID SOLUTIONS . . .



Save trouble *with Homogeneous*
Lead Lined equipment

WITH so much emphasis being placed on the need for low cost production, the chemical industry has studied the relative merits of various types of acid-resisting equipment.

These investigations, backed by the actual experience of many companies, have thrown the spotlight on the advantages of Homogeneous lead lined tanks and other major equipment. So completely is the chemical lead lining secured to the shells of these tanks that the lining is inseparable from the steel under vacuum, pressure and temperature variations up to within a few degrees of the melting point of the lead itself.

This inseparability and the well-established corrosion resistance of lead are noticeably features of Homogeneous chemical lead lined tanks, vacuum evaporators, vacuum tanks, steam jacketed kettles, acid eggs, car tanks, digesters, autoclaves and agitators.

National Lead Company is also a source of supply for the following related products: "United Tubing" chemical lead lined pipe; "United" fittings and "United" valves for handling dilute sulphuric and other corrosive liquors and acids and "United" Hardlead fittings, valves, corks and pumps.

"UNITED"

Chem-Rayon Hardlead flanged acid valves

This modernized acid valve has many features which make it specially suitable for chemical plant use.

1. It has a bonnet of steel and brass completely covered with Hardlead.

2. It has a deeper stuffing box, permitting the use of more packing, held in place by a Hardlead gland.

3. Steel studs actuating the gla[illegible] are placed in the cast iron yoke, reducing the possibility of corrosion to the minimum.

4. It has Hardlead fins cast integral with body of valve, effecting saving in weight without loss of strength.

"United Chem-Rayon" valves come in both "Y" and angle patterns in sizes ranging from ¼ in. to 6 in.

for sulphuric acid service

Chemical Lead Lined valves, pipe and fittings

For equipment in contact with sulphuric acid solutions many leaders in the chemical industry have wisely selected "United Tubing" lead-lined pipe and "United" valves and fittings.

In choosing the "United Tubing" brand, they have obtained pipe with chemical lead lining inseparably bonded to the outer steel shell. "United" lead-lined valves and fittings measure up to the same high standard of quality. For instance, all flanges are recessed to take a lead lining so that perfect lead-to-lead joints are provided — preventing leakage, eliminating waste.

It will pay you to write us for more detailed information covering equipment that must combine strength and resistance to acids.

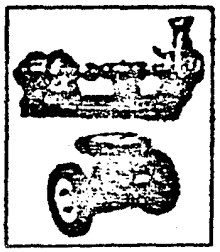
IN CHEMICAL PLANT SERVICE . . .

HOMOGENEOUS...

lead lined tanks for corrosive liquors



Homogeneous chemical lead lined tanks and other equipment, such as agitators and kettles, help the chemical industry to reduce upkeep and replacement costs.

This equipment is extremely durable and long-lived, because:

1. Its chemical lead lining is highly resistant to sulphuric and allied acids.
2. The union between steel shells and lead linings is so perfect that linings and shells are inseparable even under vacuum, pressure and temperature variations up to within a few degrees of the melting point of the lead itself.

The chemical industry has adopted Homogeneous lead lined equipment because experience has shown that it gives trouble-free service where corrosive liquors are an ever-present problem.

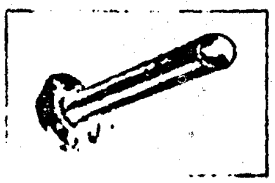
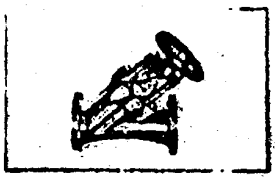
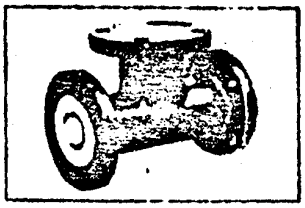
Lead-lined Equipment *saves money in corrosive liquor service . . .*







WITHOUT sulphuric and allied acids, the chemical field would be an undeveloped industry. Without corrosion-resisting equipment, acids and alkalies could not be used. Without lead-lined equipment, the corrosive attacks of processing liquors would be even more troublesome than they are at present.

Our line of corrosion-resisting equipment, embracing "Chem-Rayon" valves, Hardlead pumps, chemical lead-lined pipe and fittings, is sold under the "United" brand.

"United Chem-Rayon" valves are universally recognized for their strength and durability. Both body and bonnet are made of solid Hardlead with the bonnet well reinforced. These valves have gland followers of Hardlead and the bodies have Hardlead fins which give additional strength without excessive weight.

"United" Hardlead centrifugal pumps are made with a solid Hardlead case. The impeller is made of the same alloy and the shaft of a special acid-resisting metal.

In "United Tubond" chemical lead-lined pipe the lining is inseparably bonded to the steel and can be depended upon to stand up under rigorous service.

In addition to the above equipment, we also supply "Homogeneous" chemical lead-lined tanks, kettles, digesters, autoclaves, agitators, etc.

8 PAINTERS IN EVERY 10 use DUTCH BOY

No one knows better than a painter that there's no substitute for experience in a lasting painting material.

The experience of the most successful painters has taught them that they can always depend on Dutch Boy White Lead to give beautiful, long-lasting paint jobs that do not crack or scale. Many years of use have also proved that Dutch Boy has the advantage of wearing down gradually by gradual chalking, leaving a perfect surface for repainting.

EMPIRES PERISH
...but Lead Lasts!

● This piece of lead pipe had been buried in the ground so only 1,900 years when it was dug up by workmen excavating for a subway line in Rome.

Vespasian was emperor when this pipe was made—the inscription tells that. When Vespasian had it laid in the streets of Rome, he followed the example of Julius Caesar, who used plumbs to mark his bounds across Northumbria. In all past lead in the Roman world has been the most durable metal.

For centuries lead's unsurpassed qualities have made it a favored metal for waterpipes, roofs, gutters, pipe joints, and lead's paints have also been used for hundreds of years.

In the years lead found many uses for lead and its products . . . and one of the most important of these is the use of white-lead as paint.

Paint is used to preserve and decorate our homes, our offices, our planes, and a principal ingredient in good paint is white-lead—made by converting pure soft pig lead and ground it with linseed oil.

National Lead Company makes white-lead of the highest quality, and sells it under the name of Dutch Boy White-Lead.

Dutch Boy White-Lead gives a paint that remains attractive appearance with maximum durability. Its reputation for quality, as well as its ready adaptability to any kind of paint job, has made Dutch Boy White-Lead the largest selling brand of white-lead. Today, in this country, 6 painters out of 10 use Dutch Boy.

National Lead Company is also a dependable source of supply for many other lead products, including red-lead and other lead oxides, sheet lead, lead pipe and fittings, babbitt metal and solders. Stocks of these products are available at convenient points, and advice and information relating to them may be secured from our nearest branch.

Pigal from Marchak & Pratt, Inc. 369 Lexington Ave. New York

COMPARE THESE PROPERTIES OF

TITANOX-C

WITH THOSE OF OTHER PAINT PIGMENTS.....

Until you have analyzed the many advantages of Titanox-C you cannot appreciate how much it can help you in the manufacture of interior flat wall paints, gloss mill whites, enamel undercoaters and 4-hour enamels. Ask yourself this important question: In what other single pigment will I find all the following properties combined?

1. High opacity
2. Chemical inertness
3. High light reflective value
4. Chemical stability
5. Neutral whiteness
6. Remarkable particle fineness
7. High bulking value

More and more users are discovering that Titanox-C is extremely helpful in producing the whitest of white paints, and clear-toned finishes with velvety smoothness. Recently, many paint manufacturers have also discovered that because Titanox-C is so easily dispersed it reduces grinding time considerably ... and that in some vehicles, the use of Titanox-C makes grinding entirely unnecessary. Get in touch with our nearest branch for helpful information and prices.

TITANOX-B

MANUFACTURERS ARE GETTING WHITER PAINTS AT LOWER COST WITH TITANOX-B

Many paint manufacturers, seeking to improve their products and at the same time to reduce costs, have discovered in Titanox-B the ideal pigment. They have found that this modern pigment not only produces the whitest paints ever made . . . but that Titanox paints retain their whiteness through years of service.

When you combine exceptional whiteness and chemical stability with other well known features of Titanox-B . . . high bulking value, uniform particle fineness, high hiding power, ready mixing qualities and moderate price . . . you have sufficient reasons for the fast growing popularity of Titanox-B. Alert manufacturers realize that with all these desirable properties, it is logical that Titanox-B paints should appeal to paint buyers everywhere.

Ask us to assist you to adapt Titanox-B to your paint formulas. Write for detailed information and prices.

CONSIDER THE NEW LOW PRICES ON

TITANOX-C

Recent price reductions on Titanox C (calcium base) provide an exceptionally important reason why paint manufacturers should study the various ways in which this modern pigment will reduce costs and at the same time improve quality.

Users now appreciate that Titanox C saves grinding time. Because of its dispersive properties, it shortens the manufacturing operation. In many instances grinding has been entirely eliminated by using Titanox C.

Here are other important reasons for adopting Titanox C. It has high bulking value — exceptional hiding power—and the high degree of whiteness so essential to quality paints. The fast growing popularity of Titanox C is ample proof that this economical pigment makes paint that meets the demands of the shrewdest buyers.

Write today for new low prices on Titanox-C. Full information will be gladly furnished without obligation.

A WAY TO AVOID "PAINTY" APPEARANCE IN LEATHER STOCKS

The exceptional pastel fineness and high tinting strength of Titanox B offer improved means of preventing "painty" appearance in leather stocks. • Finishes containing Titanox B flow into the grain. They do not cover it up. They practically become a part of the leather. Titanox B makes possible a thin coating that produces uniform covering. • Also because it is chemically stable and inert, Titanox B will not react with tinting colors with which it may be combined nor with residual chemicals in the skins. Consequently, it helps prevent spottiness and discoloration. • It will pay you to consider carefully the advantages of Titanox-B in your leather finishes. Write our nearest branch for helpful information.

TITANOX

TITANOX-B LEATHER FINISHES WON'T CAUSE "SPOTTINESS"

If you seek a way to obtain clearer, brighter tones in your finishes . . . if you wish to find a way to eliminate discoloring or spottiness . . . Titanox-B (Barium base) may help solve your problem.

Through the use of Titanox-B in pigment finishes, manufacturers are obtaining products that cover well even when thinly spread. They finishes have the leather porous and open.

Titanox-B has exceptional hiding power and tinting strength. It is uniformly fine in particle size. Since it is chemically stable and insoluble, it will not react with residual impurities in the leather nor with coloring agents to develop unsightly spots. Light tone creams and grays are unusually bright and clear in tonal value when Titanox-B is employed in the tinting base.

It will pay you to investigate the economy and ready adaptability of Titanox-B.

TITANOX

TITANIUM PIGMENT CO., INC.

[illegible]

LET TITANOX-B IMPROVE YOUR LEATHER FINISHES

Most manufacturers of leather finishes agree that the ideal finish for light colored leather stocks is one that has exceptional hiding power even when thinly spread. This leaves the leather porous and open and eliminates any objectionable "gainy" appearance. ● Titanox-B barium base helps make clear-bright finishes that spread well. The reason is obvious. Titanox-B has unusual hiding and tinting strength. It is uniformly fine in particle size and is noted for its brilliancy of color, ease of dispersion. Its high refractive index will help you get better tonal values—particularly in tone grays and modern pastel shades. ● Additional desirable characteristics of Titanox-B are its chemical stability and inertness. Titanox-B never reacts with coloring agents or residual chemicals to develop unsightly spots. ● Write for further information and prices.

LEATHER FINISHES ARE BRIGHTER WHEN PIGMENTED WITH TITANOX-B

Many manufacturers are finding the answer to clear tanned, light-colored leather finishes in Titanox-B. ● Light tan, white, cream and many popular pastel finishes are brighter, cleaner, warmer in tone when produced with Titanox-B. ● The exceptional hiding power and tinting strength of Titanox-B produces finishes that cover well even though thinly and evenly spread. They leave the leather porous and open, free from any objectionable "painty" appearance. ● Titanox-B is chemically stable and inert. It won't react with colors or other chemicals to cause spottiness. ● Write for helpful information and prices.

SALES APPEAL
WITH...

TITANOX-C

The surest way to attract more buyers for your rubber goods is to improve quality — give your products new sales appeal. • Many rubber manufacturers are using Titanox-C (calcium base) to produce clearer, brighter white stocks. They also find that this remarkable pigment helps produce brighter tints in colored rubber goods. • Titanox-C, containing 38% pure titanium oxide, is the brightest of all white opaque pigments. It is exceedingly fine in particle size. It is chemically stable and inert. It has exceptional tinting strength. • Ask us to send you helpful information about the use of Titanox-C in rubber manufacturing.

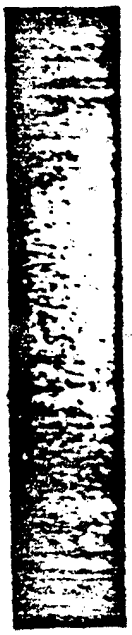
CONSTANT IMPROVEMENT IN RUBBER STOCKS BRINGS SUCCESS



The growing need for better quality rubber goods — products that have exceptional clarity and brightness and improved elasticity has resulted in largely increased use of Titanox-C. • When Titanox C is used, only moderate amounts are needed to develop color or opacity. Since it has a specific gravity of 3.1 and a high tinting strength, light, clear stocks can be attained economically with low pigmentation. Particle fineness is another important property of Titanox C that recommends it for use in rubber stocks. • You may find Titanox C exactly the opaque white pigment you need to give your products additional selling qualities. Write for further information.

ANOX

FOR BETTER OPACITY IN COATED STOCKS...TITANOX-B

Paper manufacturers, searching for ways to improve the opacity and finish of coated stocks, have secured promising results with Titanox B barium base. This remarkable pigment is distinguished by the following properties: 1 fine particle size, 2 exceptional brightness, 3 high tinting strength, 4 chemical inertness, 5 high refractive index, 6 moderately high bulking value. • In paper manufacturing Titanox-B mixes readily with clay, blanc fixe, or satin white. It disperses easily with casein size. It does not tend to thicken and it brushes out well making an even coat. • Our Pure Titanium Oxide T-O₂ has also produced excellent results as a filler in book and magazine stock. • It will pay you to investigate Titanox pigments. Discover how these products may help you produce better stocks. Helpful information will be gladly furnished.

HAVE YOU TRIED

TITANOX-B

IN YOUR COATED STOCKS?

Tests to improve the opacity and finish of "super" and coated stocks indicate clearly that Titanox-B barium base gives excellent results. ● High index of refraction, remarkable brightness, fine particle size, chemical inertness and high bulking value are characteristics found in Titanox B. It mixes readily with china clay, Blanc fixe and satin white. It disperses well and does not thicken. It results in the production of a smooth, even coat. ● Pure Titanium Oxide TiO_2 has also been used advantageously in combination with china clay and other fillers. If you are interested in securing whiter stocks that show superior opacity, investigate Titanox pigments. Helpful information gladly furnished on written request.

BULLETS OUTSCORE ARROWS

IN SPECIAL MATCH OF EXPERTS

Pistol Loads Boat at End of 25 "Shot" Match at 80 Yards with Score of 202 x 250

In a unique match at Wandamere Ranch, Buffalo, recently, Captain Paul A. Shepherd, Coach of Buffalo Police Pistol Team, defeated Frank Horack, State Archery Champion, 202 to 157, each using his favorite weapon at 80 yards on a standard American pistol target with a three-inch bull-eye.

The Horack-Shepherd match was preceded by a similar competition indoors during the past winter, when Mr. Horack challenged and beat a pistol shooter of the Buffalo Police Department at 60 feet.

This match was followed by another indoor match at the same distance, which brought Mr. Horack and Captain Shepherd together for the first time, the latter winning the event.

As a result of this, the 80-yard match on an outdoor range was staged with the results indicated above.

Captain Shepherd used U. S. .22 N. R. A. long Rifle cartridges in a single-shot pistol and his score, at 80 yards, is a fine testimonial to his marksmanship as well as to the longrange accuracy of the ammunition he shot.

The shells that WON the 32nd GRAND AMERICAN HANDICAP

The 32nd Grand American Handicap (1931) was a U. S. Ammunition event. Not only did the winner, the Reverend Garrison Rochuck, of McClure, Ohio, use U. S. Trapheads, but 3 out of the first 5 places went to shooters of U. S. Climax and U. S. Defiance Shells.

Keep in mind these significant facts when you buy trapheads this year.

● Some gunners prefer Climax trap loads—some Defiance—that's a matter of choice. But it's a matter of record that U. S. trap loads—Climax or Defiance—have helped many a man or woman to championship standing and helped many a champion stay champion. You shoot the best when you use U. S.

US

UNITED STATES CARTRIDGE CO.
111 BROADWAY, NEW YORK, N. Y.

This 1265x1300
SHOULD *establish a record*

. . . What do you say?

"Bill" Lambert, of Oklahoma City, Okla., shooting U. S. Climax, misses only 35 out of 1300 MIXED targets in Texas and Kansas State Shoots.

[illegible]

● "Bill" Lambert has been shooting his way into new-spaper headlines everywhere. He broke 200 straight in the Texas State Shoot. He piled up a long run of 250 in the same tournament. But the most significant performance of all was his combined score for the Texas and Kansas shoots. Out of a total of 1300 targets he broke 1265 and on MIXED targets, too!

That means 32 strings with only 35 targets missed in all. That means cold, calculating, shooting nerve and consistent day in and day out performance. That means, also, that "Bill" Lambert's choice of ammunition . . . U. S. Climax Trap Shells . . . has the uniformity and dependability that justify the confidence he places in it.

C. A. BOGERT BREAKS 773x800
at OKOBOJI INDIAN SHOOT

● At the annual meet of the Okoboji Indians held at Cedar Point, Ohio, June 14-17, C. A. Bogert, of Sandusky, Ohio, was high on 800 targets, breaking 773x800. His score on 600 16 yard targets included in the 800 mentioned above was 533. His long runs during the shoot were 166, 197 and 200. He used U. S. Climax Trap Shells throughout the shoot.

[illegible]

● Shoot U. S. Trap Shells this year . . . the brand that won the 32nd Grand American Handicap . . . It is a significant fact that reports on nine early state shoots showed shooters of U. S. Ammunition well out in front.

Since the 32nd G. A. H...

It's been a US year at the traps

In the fall of '38 the Reverend Emerson Hurlbut of Mt. Clair, Ohio, put on shootin' strap and smashed through the hottest clay competition to win the 32nd Grand American Handicap with U. S. Shells. Then two more U. S. shooters made it three out of the first five places in this annual American classic.

If that isn't enough to demonstrate the straight shooting, smashing power of U. S. Shells, take a look at recent New England records. U. S. shooters won the State Singles championships in Massachusetts, in Maine, in Vermont and in New Hampshire. In the 16 important championships in these four states U. S. shooters won 12, and tied for both guns in 2.

In addition, U. S. shooters topped scores consistently on state shoots in other parts of the country—on the Pacific Coast, on the Middle West, South—all over. Take a look at the shooting performances listed below and opposite.

Some champions prefer Climax trap 1 others—some Orkanee. That's a matter of choice. But it's noteworthy that a host of champions insist upon U. S.
