Call from Elmer Wheeler

Elmer Wheeler called on 4-15-70 to inform us that he is sending an additional gallon of Aroclor 1242 for a repeat chicken study. We are to review the data obtained in the earlier study and recommend dose levels for the new study.

He was concerned about whether or not the fish studies have started.

Mr. Wheeler's European trip is scheduled for April 30, and he will need up-to-date status summaries at the time of Dr. Hunt's visit on April 28.
