PCB/PCT Withdrawal Program

Latin America Area

E. Greene
A2NA

This memo is to confirm that the Program objectives have been accomplished.

Confirmatory statements from each country in the L.A. Marketing Area are attached.

The status of local unsold inventories, which were on-hand after the sales cut-off dates, is as follows:

Argentina: Materials now enroute to U.S.A. for incineration. A draft to cover the C&F U.S.A. value of the shipment was issued on Sept. 12 in favor of MARG. This arrangement permitted MARG to export the material to the U.S.A.

Brazil: Materials now enroute to U.S.A. for incineration. MOCIL drew a draft against Monsanto thru the 1st Nat'l. City Bank of New York to cover the CIF U.S.A. value of the shipment. This arrangement was necessary to permit MOCIL to export the material to the U.S.A.

Cost Rica: Material has been received at Sauget and a Credit Memo issued for the original CIF value of the shipment. We have authorized an additional $608.75 Credit, at Agent's request, to cover miscellaneous return expenses incurred by him.

Mexico: All material has been received at Sauget for incinceration except one drum of Pydraul 150. The drum of Pydraul crossed the border on Sept. 20 but Sauget has no record of receiving it as yet. When the drum is received, we will authorize a Credit Memo of $267.82 which will be in addition to the Credit Memos already issued for returned materials.

Rec'd @ Sauget on about Sept 2 9, 1972

The only costs yet to be anticipated would be U.S.A. inland freight costs from New Orleans to Sauget on the Argentina and Brazil returns, the $608.75 additional credit on the Costa Rica Return, and the $267.82 for the in-coming drum of Pydraul from Mexico. Estimating $500 to cover the inland freight costs on the Argentina and Brazil returns, total credits yet to be issued will be about $1377.
