I. INTRODUCTION

This report contains chemical and instrumental methods developed by the Spectroscopy Group at St. Louis for the Organic Chemicals Division Research and Development Laboratories projects during 1970. The methods are indexed alphabetically according to component measured and to product. The work included in this report is covered by PA TC-03, entitled "New Spectroscopy Technology".

II. GENERAL SUMMARY

Twenty-six spectroscopy methods were developed in support of Organic Research and Development Laboratories projects during 1970. These procedures were developed and applied to the analysis of products for both organic and inorganic components.

The methods developed have provided both accurate and specific data needed to evaluate laboratory projects and products. Major efforts during the year were in the Fine Chemicals, Functional Fluids, General Chemicals and Plasticizers Product Groups.

III. NEW COMPOUNDS FOR SRC

No new compounds were prepared or procured in the course of these investigations.
