Mr. Watt believes we are ready to go ahead with sound absorption and light reflection coefficients but will await final report from the Jackson, Mississippi job before reaching a definite conclusion.

In the Appropriation Request for development of acoustical plaster, provision was made for funds to cover determination of sound absorption and light reflection tests by outside testing laboratories and it is our intention to obtain this information as soon as possible. After discussing with you, it was agreed that the sound absorption test be made on 1/2" thickness since that is what U.S.G. and National show.

Pending final approval of the Jackson job, we shall start proceedings with Riverbank and Electrical Testing Laboratories for these tests.
