Mr. J. Soviak
AB - Troy

Dear Jack:

It certainly was a pleasure seeing you again last week after all these years.

And it was most enjoyable to pass through your facilities - one of the finest in the company.

The tool room itself was a bit untidy, most of which was caused by the changes being made. No doubt it will be cleaned up as the moves are completed. You're aware of a certain piece of equipment needing a guard. Let's get it on. There's just a slim chance of someone getting tangled in the belt drive - and if he should, we'd look sorta silly. "No Guard on Belt Drive-Abex Man Loses Arm" - not a very happy headline.

Other than that, all was fine. Our discussion of the Loss Prevention program brought out that you should be including a few more manhours.

Regarding our comments on Teflon disposal, attached is a copy of booklet "Handling and Use of"Teflon", Fluorocarbon Resins at High Temperatures" issued by DuPont.

According to my interpretation of the section on Scrap Disposal it's O.K. to burn the scrap. Only caution I see is in the interest of desirable vegetation - "do not incinerate or burn "Teflon" scrap in an open dump fire during periods of heavy humidity, fog, or smog, or wind.

Suggest you discuss this with Mr. Rennie. If you wish further copies of the booklet distributed, please advise.

Again thank you all for a fine visit.

Sincerely,

G. A. Riley
