SUBJECT: PCB/FISH - ANNISTON

REFERENCE:

TO : W. B. PAPAGEORGE

This morning I met with John Eck to discuss with him the current position on PCB contaminated fish at Anniston. Overall, he considers that we are doing everything necessary in this area, but he thought it would be useful if we could obtain additional information on the exact location of PCB deposits and have a better idea of where the fish are picking up the material.

In view of this, I think it would be useful if you and I could tour Anniston to discuss the subject in more detail, both with our consultants and with the plant personnel involved. Would you please contact me on your return to the office, so that we can arrange a visit?

Convenient dates from my point of view would be 6th, 7th October or 15th, 16th October.
