Celcon Project Report
- March -

Status of Celcon projects in the Special Problems Laboratory

Project	Objective	Status and Projection
Trioxane Reactor Residue (0.2)	Develop a disposal method for the TO reactor residue to replace solar evaporation.	Work is in progress to develop a disposal scheme for the TO reactor residue. It is high in acidity, heavy metals, and organic content.
MH-2 Quality (0.0) Gary	Provide analytical support to resolve MH-2 quality problems.	This project has been held in abeyance due to other priorities.

Analytical (1.5) Gary, Jackson, Branecky

1. Completed analyses of material balance samples on the methanol recovery column (T-240) (CEG-8-74).
2. Provided Kjeldahl nitrogen analyses on the recent U-10 polymer run (CEG-10-74).
3. Air samples for asbestos content, as outlined in JMJ-17-73, have been taken and will be sent to Summit for microscopic fiber count.
4. Particulate air sampling of the baghouse vents (MS-905, 483, 640, 357) is in progress. A report will be issued.

Visible Emission Evaluator Recertification

The Texas Air Control Board's (TACB) Visible Emission Evaluator Certification, obtained in Corpus Christi on June 5, 1975 expired December 4, 1975. Recertification for evaluators was held December 2, 1975. Recertification was obtained, as exemplified by the attached TACB certificate. The current certification expires June 10, 1976.

If there is a need for evaluation of Visible Emissions, please contact me at Chemcel Extension 379.
