FEEDWATER

Aerators reduce CO_2 in makeup water. Dalton White *357
Calculate continuous blowdown rate from chloride concentration. J. F. Hyam (Power's Data Sheets) 367
Charts simplify chemical dosage for treating boiler feedwater. W. D. Turner *347
Existing tank provides needed storage. K. N. White *365
Feedwater chemistry conversions. J. F. Hyam (Power's Data Sheets) *313
How Tallsyrand's condenser operating experience varied over the years. Bostwick, Cassiday & Hancock *653
Hydrazine-zeolite treated water dissolves boiler, superheated scale. Webb & Yoder *35
Internal conditions of old boilers guide water treatment for new units. U. S. Industrial Chemicals. Welsh, Rivers & Kilduff ..... *547, correction 693
Rid water of dissolved gas to stop corrosion. R. C. Ulmer *491
Silicon removed by a sludge-blanket hot-process softener. Yoder, Carbonnier & Morris *299
Surface water made fit for boilers. A. L. Wilson *283
Total raw-water hardness from ionic analysis. J. F. Hyam (Power's Data Sheets) *371
Treatment removes troublesome coloring matter. W. P. London *480
Water conditioning with sodium sulphite. J. F. Hyam (Power's Data Sheets) *801
Why inorganic materials precipitate. Dr. H. C. Ulmer *233

Flyash—see Smoke abatement

FIRE PROTECTION

Automatic electrical-fire protection. S. G. Freck *477
Carbon tetrachloride ok in proper extinguisher. B. C. Hutchins 375
Floods—Bulkheads seal against floods *349

India—Power program 259

INSPECTION AND MAINTENANCE

Bulkheads seal against floods *349
Card file keeps track of equipment maintenance. S. Martinez, Jr *558
Consider the operator's viewpoint when designing generating stations. J. H. Drake *102
Crimp lugs speed transformer repair. K. B. Hoffman *341
Establish adequate maintenance program for industrial turbines. Alf Hansen *26
Expanding boiler tubes. J. R. Brown *712
Fluorescent dye detects small leaks quickly. D. E. Hornbeck 174
Guide for plant operator in preparing new turbine oil system *691
Harbor Steam Plant of City of Los Angeles saves pump casings by welding. Carl Barlow *340
How to do milling work with a lathe. M. G. Moore *307
How to patch tracing paper. William Kagan *175
How to press-fit a large rotor on its shaft. N. L. Rea *835
Lifting rig prevents marring turbine spindle *496
Log sheets enable quick record keeping. D. M. Smith *243
Meters—clean out nipples without shutting down the main. E. Podmayer *495
Motor and pump repairs go hand in hand. M. H. Kissinger *238
Nylon brushes clean condenser tubes *432
Plug-type cap holds shaft sleeve in place. J. B. Thurman *207
Press-fitting rotors on their shafts by heating. N. L. Rea *682
Preventive maintenance requires firm scheduling. O. L. Applegate *674
Puller bars safely remove pistons and heads. J. F. Maher *794
Rebuilding blades salvages old steam turbine. W. L. Larson *384
Scale in boilers cleaned by air-jet motor. L. B. Whitlow *712
Sheet-metal housing protects outdoor motor. M. H. Pearce *176
Steam turbine's bearing pedestal cracks mended with simple tools. A. R. Eastcott *158
Tallsyrand Generating Station's condenser operating experience varied over the years. Bostwick, Cassiday & Hancock *653
Tellstats for pressure vessels 74

INSTRUMENTS

Automatic switch controls alarm circuit. D. L. Gusler *642
Meters—clean out nipples without shutting down the main. E. Podmayer *495
Revolution counter meters the compressor air output. N. Formby *643
Sampling box simplifies testing. Elton Sterrett *712
Sediment trap improves performance of regulating and recording instruments. Elton Sterrett *705
Thermocouples detect high ash level in closed precipitator hopper. O. Holubeck *243
What the synchroscope does and how it works. James Wilson *148
Instruments—see also Controls

Insulation—Quick way to find economical insulation thickness (tables) *478

Waterside Station, Consolidated Edison, finds insulation of 40 years ago in good condition *549
Yard pipeline crossing promotes safety. Elton Sterrett *354
"Power"—Editorial staff changes *443
Historical summary 69b

P

PIPING

How to determine reliable air-flow data for design of duct systems. A. H. Kern *30
How to insulate steam-traced piping effectively *433
Piping collars have advantages. F. M. Giordano *111
Plan for extensions in power-plant designs. Elton Sterrett *43
Rid water of dissolved gas to stop corrosion. R. C. Ulmer *491
Sampling box simplifies testing. Elton Sterrett *712
Series orifices reduce pipe erosion. Albert Lee *174
Shortcut to making pipe elbow developments. Hans Schmidbauer *496
Slip joints prevent expansion troubles. Elton Sterrett *542
Steam line leaks eliminated for oil tank. J. R. Brown *557
Waterside Station, Consolidated Edison, finds insulation of 40 years ago in good condition *549
Yard pipeline crossing promotes safety. Elton Sterrett *354
"Power"—Editorial staff changes *443
Historical summary 69b
Power factor—Power factor calculations made easy. O. Oldroyd *167

POWER PLANTS—STEAM

American Linen Supply Co. finds well-planned boiler plant pays big dividends. R. J. Combs *452
Bethlehem Steel boilers designed for blast-furnace gas. W. M. Cline, Jr *350
Blackhawk Station of Wisconsin Power & Light increases capacity by new one-boiler-per-turbine unit. L. M. Abrahamson *320
Brooklyn Light & Power's Station C—strictly unit construction *589
Carborundum Co. extends and modernizes steam facilities *226
Central station trends (charts) 584
Consider the operator's viewpoint when designing generating station. J. F. Drake *102
Dayton Power & Light's Hutchings Station model *232
Fraser Companies, Ltd. modernizes plant with eye toward future expansion. W. P. London *388
Fraser Companies, Ltd. removes troublesome coloring matter in feedwater by treatment. W. P. London *480
General Electric's new plant at Coshocton, Ohio, for plastics production *33
Granby Consolidated Mining, Smelting & Power Co. burns lignite and discarded slack coal. A. R. Eastcott *276
Guymon Station, Okla. takes on load. L. L. Nunley *483
Harbor Steam Plant of City of Los Angeles saves pump casings by welding. Carl Barlow *340
Hydro, diesel and steam, in unique combination, serves Salt River Valley *354
Industrial power trends—steam generating facilities dominate expansion programs (charts) 610
Interstate Power's Lansing Station yields good performance with carefully worked out design *598
Jacksonville, Fla. municipal system plans 60,000-kw station. Herbert McClammy *288
London plans first oil-fired central station in Britain. H. J. Randall *789
Massaid Tire & Rubber's boiler plant extension designed for possible h-p operation *622
Melchers Distilleries, Canada, new boiler plant design features. J. A. Kearns *4
Metropolitan Edison in Middletown, Pa. new topping turbine served by high-pressure boilers. T. Y. Mullen *670
Michigan State College new power plants connects to old one across river *624
New York Steam Corp. generates additional electricity economically due to steam demands. M. J. Steinberg *297
1948 design survey of typical industrial and institutional power plants: 200 psi or above (table) 628
1948 design survey of typical industrial and institutional power plants: below 200 psi (table) 632
1948 listing of typical central-station and municipal power plants (table) 604
1948 modern plant survey 583
Norton Co. expands power service facilities with 50,000 kw per hr unit *818
Oklahoma Gas & Electric's Beerbower Station adds 25,000 kw *562
Oklahoma Gas & Electric's Arthur S. Huey Station capacity with gas turbine. Blake & Tupy *516
Pacific Gas & Electric's Station F—extension designed for quick pick-up *580
Philadelphia Electric expands Barbadoes Station to meet growing demand *784
Probability theory helps determine system reserve generating capacity. Giuseppe Calabrese *433
Public Service Electric & Gas' Essex Station has a cond 1000F unit in U.S. rated 100,000 kw *601
Pullman Standard Car Manufacturing expands and modernizes Chicago plant *620
Sorg Paper Co. modernizes plant with rebuilt steam turbines. Suhs & McArthur *75
