ASBESTOS DUST SEMINAR

At the Departmental Asbestos Dust Seminar on 9/11/73, I indicated that we did not intend to publish detailed minutes of the meeting. However, two of the participants volunteered to make available material which they discussed at the meeting. Attached are copies of the information presented by George Lang covering the status of asbestos-free insulating materials and reference material used by Ingo Zeise in a discussion of respirators and threshold limit values.

Subsequent to the meeting, I prepared a brief memo for J. A. Sigman to highlight the significant points covered in the discussions. I am attaching a copy of that memo for your information.
