Subject Asbestos Surveillance

Date May 8, 1978

PLAINTIFF'S EXHIBIT

ETCO-720

The Medical Department has an on-going biological/medical surveillance program for all asbestos workers who are exposed to 8-hour TWA of two fibers/cubic centimeter, less than 5 ug in length, as determined by Industrial Hygiene surveys. This is by OSHA standard and we must comply.

In order to assure compliance, we must provide specific tests and physical examinations for all these employees. The Medical Department depends on Plant Management to provide a listing of all employees so exposed. Presently, we have a listing of approximately 40-50 employees on this surveillance program.

In light of the recent publicity about asbestos exposures 20 years ago, Medical wants to be absolutely certain we have a complete listing of all employees who must be included in this program. Right now we feel (maybe unjustifiably) that some employees are "slipping through the cracks." We'd appreciate you doing your usual, thorough job in compiling this employee list to enable us to:

1. Update our program
2. Check the records to see who is due for a complete physical.
3. Insure as thoroughly as anyone can the health of our asbestos-exposed employees.
4. Comply with the statute.

Mr. Chuck Bruton will handle the mechanics of this program for me, so I'd appreciate having him receive the necessary information.

Thank you for your continued cooperation.
