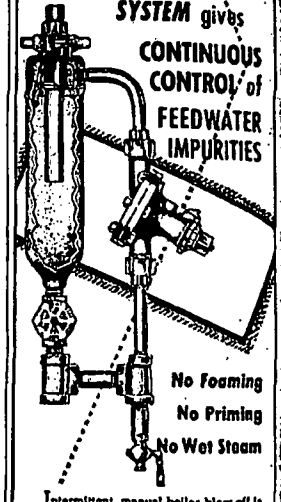
BOILER BLOW-OFF no longer HIT-or-MISS

the MULTOMETER SYSTEM gives CONTINUOUS CONTROL of FEEDWATER IMPURITIES



No Foaming
No Priming
No Wet Steam

Intermittent, manual boiler blow-off is inaccurate, time-consuming, and wasteful of water and heat. The MULTOMETER is the modern, effective way to control the impurities that exist in all boiler waters. It is instantly adjustable to fit variations in load. It is easily installed on all boilers. It cuts working time and fuel costs. It is available in simple control units or in combination with heat reclaiming equipment. Hundreds in continuous operation for 10 years or more.

Write for illustrated, fact-filled booklet on how to keep boilers at top efficiency.
