The attached OSHA news release is not good but it should have no effect on our operation here, and hopefully it won't affect too many of our customers.

The Asbestos Information Association / North America has "fought" OSHA for several months on issuing an ETS. ~~OSHA~~ there is a 100% political motive on OSHA's part. The AIA/NA filed suit this morning (minutes after the ETS was filed – we were prepared) to challenge OSHA's ~~reasoning~~ justification for the ETS.

I prepared the attached UCC response for "home office" use. Do not discuss the OSHA release or the UCC response with anyone calling from the media or any outsiders you do not know. All inquiries of this nature should be referred to me.
