Dr. Arthur J. Vorwald, Director
The Saranac Laboratory
Saranac Lake, New York

Dear Art:

Next Tuesday, May 9, I expect to be again at the Sayreville, New Jersey plant of our Kaylo Division. You will recall that Tom Durkan and Ed Urban made some extensive field tests there some time ago. We understand, however, they have been tied up with rush work and haven't been able to complete the analysis.

I am wondering whether they have any of the analyses made yet which show the percent asbestos dust in gross air samples taken in the finishing department and in box cars while the latter are being loaded with Kaylo roof tile. The percent of asbestos in the air at these points has been of great interest to us and we are not sure our own tests made in the past are reliable. Perhaps Tom might have some information on this which he could wire to us before we leave for the plant next Monday.

It was good to see you last week in Atlantic City, even though it was a fleeting glimpse.

Personal regards.

Sincerely yours,

Bill
