Occasionally.

Q And when you say occasionally, can you estimate, over the time that you were there, about how many clutch jobs --

A Maybe all of those years, maybe I changed maybe 10 or 12, something like that, over a period of '45 to '62.

Q Are there any reasons why the clutch jobs were so much less than the brake jobs were?

A Repeat that, please.

Q Is there any reason why the work on clutches, and installing clutches, was less than the amount of work that you did on installing brakes?

A For one thing, the transmission is awful heavy, and that had to be removed back and put back in place once you put the clutch in.

Q Do you know any reason why you only did about 10 or 12 clutch jobs the entire time?

A Well, there may have been more done, but that is what I did.

Q That is what you did?
