RE: THE USE OF ASBESTOS IN PIPE INSULATION

A prior check of our insulating products revealed that no asbestos was utilized in normal piping insulation. This information was relayed to you by F. F. McAllister the week of June 15th. However, subsequently it has been determined by one of our vendors that the finish coat used on joints does contain some asbestos. As a result, we will handle this material while wet, and look for an alternate material free of asbestos.
