I talked to Dr. Pocock, Assistant Director - Corporate Medical Services for GE concerning any epidemiology studies that they had done in relation to their use of PCBs. Dr. Pocock confirmed that a Dr. B. J. Selikoff of Mt. Sinai was conducting a study but it was not complete, and couldn't really comment until it was. He also reported that Dr. Selikoff had reviewed the Mobil Oil study and questioned the validity of it and said the results are open to question.

Dr. Pocock also said that GE's own study did not show any problems.
