Acoustical Plaster for Machine Application
J. R. Watt - rc
W

cc: Mr. M. Reed - Fort Dodge
Mr. H. J. Zelms - Acme
Mr. C.E. Abbey - Ardmore

In checking our machine application acoustical plaster file, I found Mr. Shuttleworth had put a note on it that you stated sewn end bags do not fill good with this product and that they should be pasted end bags.

All of this material you have made was shipped in open mouth Kalite bags, and it was my understanding that it was made in the Kalite mixer. If so, how do you know what type bag would work on the Bates machine? Also, when I last talked to you concerning mixing and bagging this material, you said you would send me a report giving the mixing procedure, mixing time, and speed of mixer necessary to break up the "bundles" of asbestos fibers and thoroughly blend this material. Please send this information soon as possible to all concerned.

CDS
Talked to Leo - he was referring to sewn and pasted ends on open mouth bags. He is going to send in report on mixer speed, mixing time etc.
