Monsanto To Control Its Pollution

The Monsanto Queeny Plant in St. Louis is tackling its pollution problem with a program that should effectively eliminate pollution emissions by 1972, according to Larry W. Keith, pollution control engineer for Monsanto Co.

Keith spoke Tuesday at the Air Pollution Conference at the University on Monsanto's air pouultion abatement program.

* * *

Monsanto has had pollution control equipment in operation for 40 years, but the official abatement program was organized in 1957, Keith said.

Keith said the objectives of the program are to make the company a good corporate citizen in the community, to do what is right and necessary to control pollution and to comply with pollution control regulations.

Keith said the company spent $3 million on pollution control from 1965 to 1969 and plans to spend $10 million from 1970 to 1974.
