Q Okay. Do you recall that in that study, as well as in the 1976 study, it didn't involve mesothelioma?

A That is correct.

Q Okay. You also talked about the Kauppinen study from Finland.

And I think you indicated in response to one of my questions that Mr. Hoffman gave you that study; is that correct?

A Yes.

Q Okay. Now, am I correct that that study was neither a case control study nor a cohort study, as we understand the terms?

A That study, if I remember correctly, was basically a study from national registers.

Q Okay.

A And involved, also, of course, measurements of dust concentrations in various settings.

Q Okay. So it wasn't a case control study; is that right?

A That is correct.
