Mr. J. L. Myers

As I understand it, our present plans are to package the SG-103 for Kentile in 50 lb. Valeron cross-layered plastic bags. In examining the normal cost associated with this product, it is obvious that this packaging approach is very costly. Assuming that we get the recalcitrant pellet cooler into effective operation, would it be possible to use a monolayer polyethylene bag of 100 lb. capacity and enjoy a significant cost saving?
