C. K. Ageler

- Lithopone -
New Titanium Type Pigment

9/18

I have discussed National Lead's new use of RCHT type of pigment in emulsion paint with Mr. Kohr. Mr. Kohr informs me that he has been down to National Lead Company three times on this proposition and that their story is the use of RCHT with starch, and not protein. He further informs me that they did not indicate to him that the RCHT was a "new" type of pigment but only showing how he could use RCHT in emulsion paints by replacing protein with starch. As I previously indicated to you, the quality of such a paint is questionable.

Mr. Kohr stated he would get literature describing their recommendations on this usage.
