Re: Asbestos Insulation Dust Exposures,
No. 2 Storehouse

Dear Mr. Moore:

The Medical Department has recently become interested in the extent of exposure to asbestos insulation dust at No. 2 Storehouse.

It is felt that maximum exposure to these dusts may occur during handling operations such as unloading and stocking a shipment of materials in loose form. Burlap bags of #302 rubberoid cement and "asbestos float" and paper bags of #450 insulation cement comprise this group.

I would like to carry out a study of the dust concentrations during the unloading of a shipment of asbestos cement. It would be appreciated if you would notify me upon the arrival of your next shipment of this material.

Very truly yours,

FRED S. VENABLE
Industrial Hygienist
Medical Department
