Under Item #7, the replacement of asbestos with another type of fiber is mentioned. This replacement of asbestos is important in the regular Illinois product as well as any new product. In fact, it may be even more important. So, I would like to see the R & D project on Illinois include as a specific goal the replacement of asbestos in regular Illinois. This would require some test work to assure us that such a substitution would result in a Illinois equal to or better than the present product.
