INSULATION MATERIALS

ADHESIVES

FAST SET

Fibrous Adhesives

Carey's

Fibrous adhesive is a very versatile and dependable bonding agent; but, for best results, all surfaces must be free of dust. A paint brush wetted and shook out should be used on calcium silicate prior to applying the adhesive. A much better bond results if both surfaces of calcium silicate are buttered.

Composition

A sodium silicate vehicle and asbestos fiber filler. Do not use with glass insulations or fabrics.

Color

Gray

Viscosity

Soft paste

Application Method

Brush or trowel

Coverage

30 to 35 sq. ft./gal. - 1/16" wet film thickness

Drying Time

Bond: 4 to 6 minutes
Set Through: 6 hours

Temperature Limits

Insulation surface: +50°F to 800°F

Flammability

Wet: Non-flammable
Dry: Will not burn
