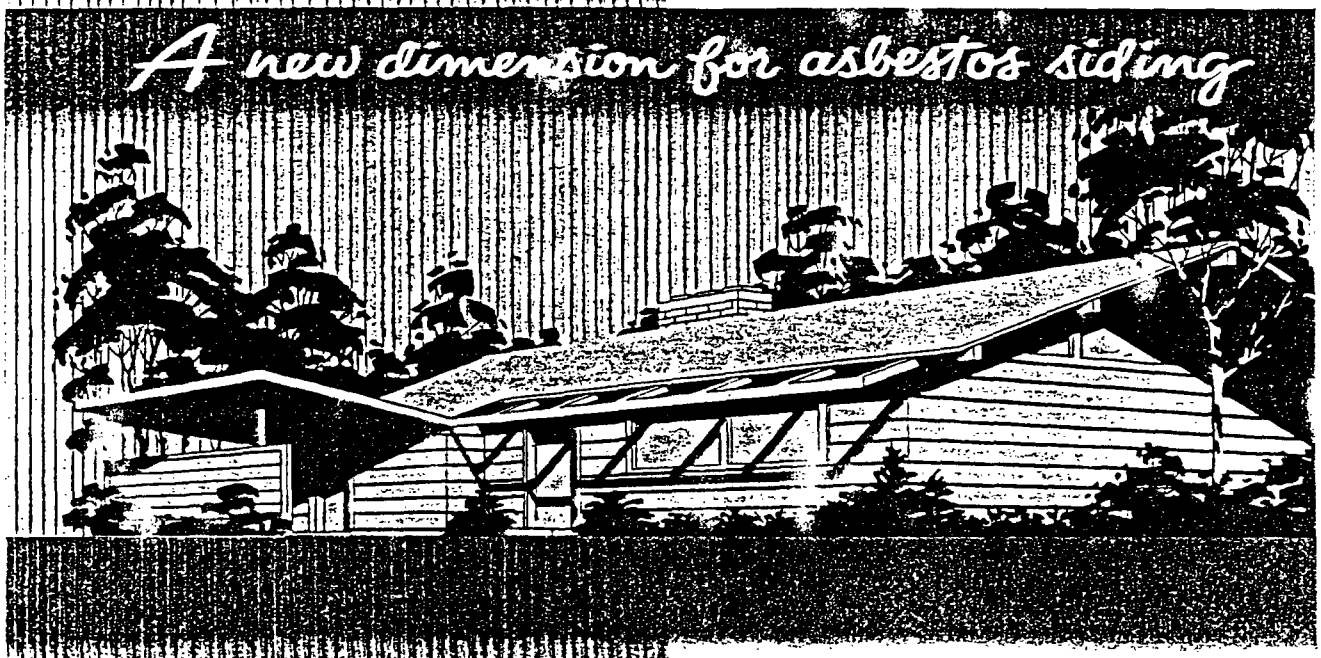
SHADOW ACCENT GLATEX

98-63-R

A new dimension for asbestos siding



A new deep shadow band on GLATEX, the superior asbestos siding shingle with the exclusive china-like surface, gives an entirely new sweeping appearance to a house. The natural shadow effect is achieved with a darker tone of the shingle color—a vignetted band just below the butt of each unit. End joints between shingles are "lost" in delicate surface striations. Just nail the shingles on—the shadow is there without costly attachment systems. GLATEX is the true ceramic-type finish siding shingle; free from dirt-catching surface pores.

Ideal for new construction—the best answer for a distinctive residing job.
