someone's lungs who is only environmentally exposed to asbestos?

MR. IGNATOWSKI: Objection.

THE COURT: Overruled.

A Well, as far as fibers are concerned or asbestos bodies?

Q Either one.

A The fibers -- well, asbestos bodies, if one finds more than two, two or more asbestos bodies, that is, I think, generally accepted to be an indication that the person has had significant exposure to asbestos. The finding of two or more asbestos bodies.

In fact, only a small percentage of asbestos fibers become coated and become asbestos bodies.

Some people with occupational exposures to asbestos may not even have asbestos bodies that can be found at that level, but in general, if it is two or more, that is a good indicator that there has been significant asbestos exposure.

As far as asbestos fibers are concerned,
