Confirming our recent discussion, toxicological studies of the chlorinated biphenyls, chlorinated terphenyls and brominated quaterphenyls will be curtailed to conform to recent policy decisions relating to the manufacture and sale of these materials.

Current studies are too advanced to terminate at this time and final reports should be available within weeks.

I will arrange with Bionomics, Inc., Hingham, Massachusetts for acute fish toxicity studies of Aroclor 1016, Aroclor 1242, and DDT. This study will cost approximately $10,000 and hopefully will result in information to help us determine the need for more detailed long term residue studies.

No further studies of biphenyls-terphenyls-quaterphenyls are proposed for 1972.

W. B. Papageorge
