closed, the bay door was closed, it got to be opened. When it was opened, it was only five.

Q I misread your chart there. The 13.5 represents the peak of the activity when the door was closed?

A When the bay door was closed and the monitoring conducted with the automobile bay door open was the five.

Q Okay. While you are still up, and we can get rid of -- and before we can get rid of this, I would like to show you what has been marked as Ford Exhibit 86, and I will tell you what this is.

This is an attachment to a study or a test done by Dr. Millette, and he has testified in this case.

Are you able to identify what this picture represents, Doctor?

A I haven't seen it before.

Q Well, do you want to take a look at it then?

A That is fine. Let me look at it for a
