same insulators, one of the risks of their trade was a disease of asbestosis?

A Of course. They had no substitute. They had to have something to insulate high temperature pipes.

BY MR. SMITH:

Q You agreed with that, but my question was, do you agree that you had known since the 1940s that the asbestos workers who were using the asbestos pipecovering materials were at risk of getting asbestosis?

A No, you mean what would I have done about it?

Q Not what you would have done. You had known that that risk existed?

A Yeah, I think so.

Q And that was one that you knew during the time that you were an assistant to the president of Owens-Corning when you were at Toledo, correct?

A Right.

Q And that knowledge then, is consistent with
