Subject Water Content of Pyranol 1476

Yesterday I received a letter from Mr. Clark of the General Electric Company, Pittsfield, Massachusetts, along with an extra copy which I am enclosing. This letter is in reference to the water content of G. E. Pyranol 1476 which has been shipped to G. E. from Anniston.

Mr. Clark charges that the water content in four out of six shipments during June, July, and August have been above the thirty-five parts per million, tentative limit which has been set. We, at Plant B, have been fairly successful in keeping the water content of the shipment of Pyranols for this Plant below the thirty-five parts per million figure. This is accomplished by blowing a stream of dry air (dried by means of an electro-dryer) in the tank while the material is still hot.

It seems that Mr. Clark is still playing both ends against the middle. This time Plant B gets the pat on the back.
