G. W. [illegible] - ANNISTON

TO: DR. W. RICHARD

Re our proposed program on metabolic studies with various Aroclors, can we make sure that any Aroclors that are tested either within Monsanto or elsewhere are [illegible] characterized with regard to [illegible] and [illegible] recorded. We also should make sure that all parties testing these materials retain samples and that Anniston also retains samples even though this may mean keeping samples longer than normal.

I also believe Aroclor 5460 should be included in these studies.

I make these requests because of the "local" difficulties we are having with our petition to F.D.A. on A-5460 approval.

C. PATON
