Subject: A comparison of fluoropolymers and other polymeric PFAS
Received: Mon 7/18/2022 4:17:26 PM
220718_Comparison_Fluorinated_Polymers-confidential.pdf

Dear [redacted] 5.1.2e dear all,
I would like to again thank you for the time you took on 6 July to participate at the session arranged by Pro-K on fluoropolymers. In the context of the collaboration between Chemservice and Pro-K, attached you will find a report in which we perform a comparison between fluoropolymers and other polymeric PFAS. In this report, we try to highlight the differences between these products. Indeed, fluoropolymers are not only different from other short-chain (or long-chain, non polymeric) PFAS; also between the polymeric materials that fall into the PFAS group of substances there are significant differences in terms of properties and expected human health or environmental concerns. The scope of the report is to help to avoid confusion between these polymers. While we expect to release this information when relevant in the restriction process (e.g. Public Consultation), for the moment we prefer to regard this information as confidential, so we would appreciate if you could keep this for internal use only.
During this week we also expect to share a report describing specific applications of fluoropolymers with a focus on potential alternatives and on the consequences that could be expected from substitution of fluoropolymers with other currently available materials.
We hope you will find this information of interest and of course we would be happy to discuss further on the content of the attached report, if you should consider this appropriate.
Saludos cordiales / With best regards / Mit freundlichen Grüßen
