Aroclor Tissues

Monsanto

Bob Keller called to inquire about the following:

P7297 - Were any tissues saved for analysis?

C7299 - Is there any plan to save tissues? If not, we should plan to save tissues at termination of the study.

A8570 - Tissues?

B7298 - Are tissues scheduled for 18 months? For the 12 month collection of tissues, the following are missing:

1242 & 1254	10 ppm female 100 ppm female 1 ppm male
1260	1 ppm female

These are considered to be of critical importance.

J7300 - Were any hatched chicks saved for analysis? They are not certain of the code system for the samples submitted. Please clarify.

In the case of all studies, were any tissues saved from animals which died?

How many cubic feet of freezer space will be required for tissues yet to be sent?

Keller would like to have samples of any retained mixed diets used in the studies.

There is some urgency for this information.
