Re: Economic Thickness Study (Cold)

Gentlemen:

You will recall at the last T & R Committee Meeting you asked that I convey to the Board of Directors your thoughts relative to the Economic Thickness Study (Cold), i. e. that you believed that the study should be made available to engineers, architects, educational institutions, etc., in some form.

The Board of Directors discussed this subject at their recent meeting and concluded that the study should not be released since the data could be misinterpreted. They did, however, express the desire that the Committee standardize on condensation thicknesses, and therefore this subject will be placed on the Agenda for the next T & R Committee Meeting.

Sincerely yours

J. M. Barnhart
