Subject Medical Surveillance Program

ASBESTOS

The Occupational Safety and Health Act (OSHA) requires that every employee working in an occupation, where he has been exposed to airborne concentrations of asbestos fibers, should have a comprehensive medical examination to determine if there is reaction to past exposure.

The medical surveillance is to consist of a medical history (questionnaire), pulmonary function testing, clinical laboratory procedures, a standard 14" x 17" chest x-ray and an examination by a physician.

Enclosed is the order for your chest x-ray. This order should be taken promptly to the Kanawha Valley Radiologists, 416 Division St., South Charleston, WV, and no appointment is needed. As soon as your x-ray report has been received, the Medical Department will telephone and schedule you to complete the remaining procedures to fulfill OSHA asbestos requirements.

Very truly yours,

R. J. Sexton, M.D.
Plant Medical Director
