5K ASBESTOS June 5, 1968

Henry Dehr

This refers to some correspondence concerning wet asbestos received from Chicago.

We have always scrapped wet asbestos whenever we found it in stock. Occasionally there have been problems because of roof leaks around the drains and conductors, but the storage area from which this material was taken is very dry. Len Winchester has personally reviewed the remainder of the asbestos that is in storage and in his opinion, it is satisfactory for shipment to Plant 4.

Upon receipt of your instructions we will ship it to you.

INTRA-COMPANY COMMUNICATION

SUBJECT Asbestos Shipments To Plant 4

DATE May 28, 1968

TO W. J. Sheehan

cc: H. G. North
L. W. Winchester
L. S. Dymitro

We have always scrapped wet asbestos whenever we have found it in our stock. We have had some problems with wet asbestos because of roof leaks around the drains and conductors. Len Winchester personally investigated the shipment in question to Plant 4 and we did not knowingly ship any wet asbestos to Plant 4. The storage area from which this particular material was taken is and was very dry.

Len Winchester has personally reviewed the remainder of the asbestos that is in storage and it is his opinion that this material is in a dry condition and satisfactory for shipment to Plant 4.

RE: 5K Asbestos Fibre

I suggest you handle the attached.

We have checked the matter out relative to the 100,000 lbs. which was shipped. Per Mr. John Toman, it would appear from the samples submitted by Plant 4 that the material had been wet. Mr. Len Winchester has informed me that to his knowledge the material was dry when shipped. Mr. Bob Kessler has checked the truck lines - material shipped in closed trailers and nothing noted by Plant 4 on the Bill Of Ladings at time of receipt.

I will contact Mr. Vince Labrecque for an evaluation of the remaining 25,000 lbs.

INTRA-COMPANY COMMUNICATION

SUBJECT 5K Asbestos from Chicago

DATE May 14, 1968

TO H. North

Enclosed are samples of asbestos from bags received from Chicago. The material is not processable.

Since your receiving inspection is accepting finished Victopac to a 1% AQL, I truthfully cannot use this type of material at all. It appears to have gotten wet and then walked on.

Consequently, we will be unable to use any of the 25,000# of asbestos remaining in your warehouse unless you can guarantee its quality as to moisture content.

As soon as we determine how much of the material on hand from Chicago that we cannot use, we will inform you.

Enclosed are samples of asbestos from bags received from Chicago. The material is not processable.

Since your receiving inspection is accepting finished Victopac to a 1% AQL, I truthfully cannot use this type of material at all. It appears to have gotten wet and then walked on.

This is not a true statement! We have been sorting all the material (V61) that we have received for the Ford 4194 gasket. If we did use a 1% AQL we could not accept any of plant 4's material.
