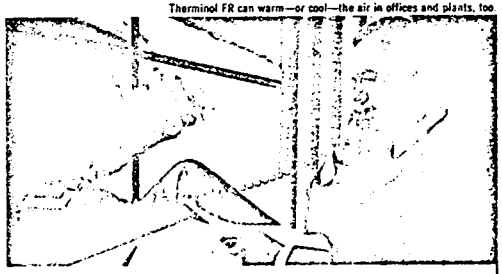
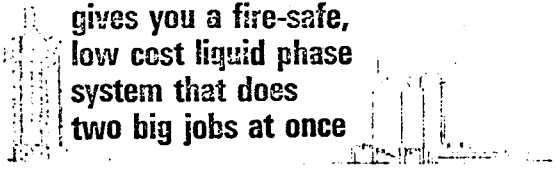
Therminol FR supplies the heat to fry these doughnut sticks.

Therminol FR can warm—or cool—the air in offices and plants, too.



Get both process heat and space heat with one system

Monsanto's Therminol® FR heat transfer fluid gives you a fire-safe, low cost liquid phase system that does two big jobs at once



It's no trick to wring two systems' worth of work out of one Therminol FR heat transfer system because you can count on positive, precise (± 2°F), flexible temperature control. A Therminol FR system will run as hot (up to 600° F) or as cool (down to 0° F) as

Therminol FR fluids save money because non-pressurized, liquid-phase heat transfer eliminates the costly construction and expensive monitoring and safety devices you need with high pressure systems. A Therminol FR system can even be moni-

It's no trick to wring two systems' worth of work out of one Therminol FR heat transfer system because you can count on positive, precise (± 2°F), flexible temperature control. A Therminol FR system will run as hot (up to 600° F) or as cool (down to 0° F) as you want it. It can supply high heat to a hot process, or moderated heat to space heating lines . . . all at the same time . . . and do two jobs at once. Nice work, but that's only the beginning.

Therminol FR fluids provide extra safety because they do not support combustion—even when exposed to direct flame—and require no system pressure. They are the only heat transfer fluids listed by Underwriters' Laboratories and recognized by F.I.A. and F.M.A.

Therminol FR fluids save money because nonpressurized, liquid-phase heat transfer eliminates the costly construction and expensive monitoring and safety devices you need with high pressure systems. A Therminol FR system can even be monitored remotely.

Therminol FR fluids are thermally stable, chemically inert, noncorrosive and nonvolatile. Properly maintained, a Therminol FR system operates indefinitely and requires no makeup.

Therminol FR heat transfer is first choice in new installations, but the economy, safety and efficiency of these systems often make them look good for conversions. Learn more about how Therminol FR could work into your plans by returning the coupon.
