SUBJECT: Environmental Health Project #GP-3

You recently received a report from me on the results of a survey of asbestos handling in the Chlor-Alkali area. Since that report was written there has been a change in the TLV for asbestos. This change was received in our office this date and I wanted to pass it along to you so that you can make the appropriate change in the report you received.

Asbestos (all types)----------*5 fibers/ml > 5 microns in length

* As determined by the membrane filter method at 400-450 X magnification (4 mm objective) phase contract illumination. Cencentrations 5 fibers/ml but not to exceed 10, may be permitted for 15 minute periods each hour up to five times daily.
