DATE September 7, 1967 CC

SUBJECT CEA 1430)
CEA 1800) Increase Aroclor Capacity

REFERENCE

TO Project Scope Report Distribution List

Attached is the Project Scope Report for the above job. The project is divided into two authority numbers for control and execution; however, both projects are closely related and apply to one product group and only one Scope Report is being issued.

The project provides for new storage and blending and new flaking and drumming facilities in a new manufacturing building at Anniston. It provides for a new 40M lbs/year production facility added to the existing plant at WGK.

An appropriation grade estimate has been prepared based on a definitive scope which is included in the appendix of this report.
