G. W. MILLER - ANNISTON

Re our proposed program on metabolic studies with various Aroclors, can we make sure that any Aroclors that are tested either within Monsanto or elsewhere are completely characterized with regard to physical properties and production records? We also should make sure that all parties testing these materials retain samples and that Anniston also retains samples even though this may mean keeping samples longer than normal.

I also believe Aroclor 5460 should be included in these studies.

I make these requests because of the "local" difficulties we are having with our petition to F.D.A. on A-5460 approval.
