Ralston-Purina Canada called Bill Maddox. They want to return fluids. They will be returning:

1. 7 drums Pydraul 150-A
2. 2 drums non-Monsanto flushing fluids
3. 200 gallons (24 drums) - competitive hydraulic fluid contaminated with PCB at ~500 ppm drained from their systems.

I told Bill to accept material back freight collect and to make sure International and plant adequately document costs and what we receive. I recommend we cover 150-A as we did for second generation fluids for Ralston-Purina's U.S. plants. However, I believe all costs of freight, handling and incineration on non-Monsanto fluids should be for Ralston's account.

Attention D.Z/T.W.O: Ralson-Purina are claiming against us on PCB/PCT and even new Pydrauls. This is being handled by the legal personnel of both companies. Please do not visit Ralston-Purina in Canada to promote Pydraul. Please be sure Nocan documents what is returned to St. Louis and the costs we incur.
