FOR SAFETY'S SAKE

Control Valves from the Floor

Babbitt *Adjustable* SPROCKET RIM *with Chain Guide*

ELIMINATES
STEP-LADDER
CLIMBING
RISKS

● Range of 10 adjustable sizes take care of all valve makes and types; fits valves about diameters from 2 to 30 inches.

● Climbing on benches, machines, boilers or treacherous stepladders to control overhead valves is absolutely unnecessary, foolish risking of life and limb. Why permit such risks when the safe and sure BABBITT Adjustable Sprocket Rim with Chain Guide is available at such low cost? Overhead valves are conveniently and safely operated right from the floor!

● The BABBITT Adjustable Rim fits all valves, with either rising or non-rising stems. It is installed quickly by clamping onto the hand wheel of the valve.

● *Write today for Catalog Bulletin P, surprisingly low prices, and name of nearest distributor*

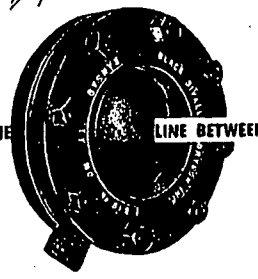
Damocles needed a SAFETY HEAD

Remember the legend of Damocles? His tyrant ruler compelled him to sit in the royal court for one day with a naked sword suspended over his head by a single hair.

THE MORAL: There are many "naked swords" hanging over industry's head today too. Perhaps you're a fellow sufferer with Damocles. Your plant may be threatened by damage from overpressure within pressure vessels. Damocles needed a warrior's helmet to save him from his sword . . . he needed a "safety head" tailored to his requirements. Pressure vessels need BS&B Safety Heads tailored to your particular pressure specifications . . . designed to fail safe when overpressure occurs.

BS&B SAFETY HEAD

THE FINE LINE BETWEEN SAFETY AND DISASTER . . .



Your Best Protection From Overpressure Within Pressure Systems

The heart of the BS&B Safety Head is the rupture disc. When this disc ruptures at a predetermined pressure you relieve the overpressure within pressure systems that spells safety to your personnel, protection to your property and valuable equipment. Knowing that BS&B Safety Heads are on the job in your plant affords you mental peace.

Into the rupture disc is built a controlled weakness. It's designed to fail safe within plus or minus 5% of the predetermined pressure specifications. You give us the necessary operating information and BS&B will give you a safety head with an action that is fast, positive and accurate . . . regardless of whether your pressure applications are for air, gas or liquid—bland or corrosive.

First, the metal is selected for fabrication to specifications of any given lot of discs. Then discs are selected at random and tested to destruction after lot is completed. If each one tested does not break within 5% of the rated pressure the entire lot is discarded. Rupture discs are available within range of 5 lbs. to 40,000 lbs.

BS&B Safety Heads can be used for either primary or secondary relief.

Why not remove one of "the swords of Damocles" that may plague you. Write today for complete BS&B Safety Head Catalog and details. There is no charge or obligation for a complete analysis of your pressure safety requirements.
