At WGK Plant Subject BIPHENYL STORAGE
TSD JOB NO. 729:1886

The replacement of the existing and leaking biphenyl storage tanks in Dept. 246 should be based on our need for storage for estimated operations within the foreseeable future - in other words, without regard to any old agreement to keep biphenyl in storage for G.E.'s electrical requirements. We should size our replacement storage tanks to permit the efficient operation of our Aroclor unit.

Control of biphenyl inventory at both Anniston and Krummrich, and control of finished Aroclor inventory, will be handled in exactly the same manner as all other finished goods inventories in the Division.
