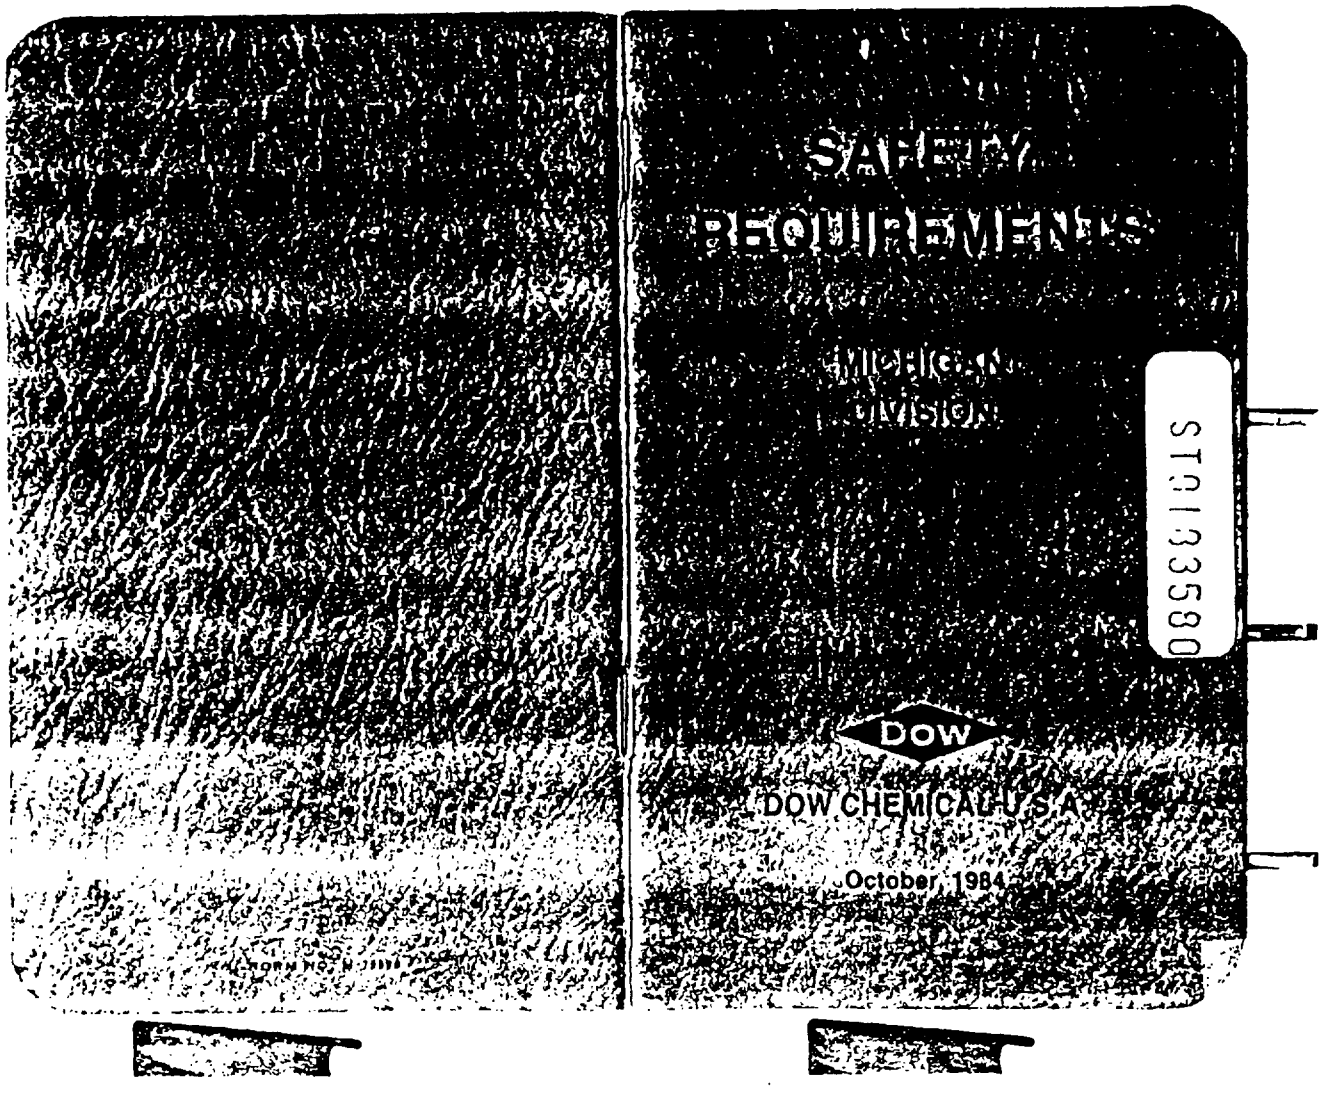
PLAINTIFF'S EXHIBIT

DOW-1905



Contact Environmental Services for proper disposal instructions.

2. **High-Level Work**

Work more than ten feet above ground requires either guard rails, safety belt or harness and lanyard or safety nets.

3. **Safety Devices**

Devices such as guards, shields, governors, limit switches, rupture discs and popoffs (relief valves) must not be bypassed, made inoperable or otherwise defeated.

**Drinking Water** (GSS-765)

Additions or alterations to <u>any</u> drinking water outlet or city water system shall be permitted only with the approval of the authorized Dow Master Plumber. Do not connect drinking water to any other system.

**Process Piping**

Process piping is not to be used as support to hoist material or equipment without permission of the owner of the piping.

6. ***Hand-Turning Rotating Equipment***

Using a wrench to rotate or hand turning a pump shaft or other rotating parts must not be done

receiving organisation. Consult as needed with Fire, Safety, Environmental Service or Industrial Hygiene.

8. Storage & Handling of Flammable Liquids in Small Quantities (GSS-130)

Storage containers must be suitable for the liquids volatility, flammability and quantity stored.

Proper storage shall include grounding, spill protection, protection from ignition sources, ventilation and proper labeling.

Flammable liquids no longer required must be promptly and properly disposed of and not allowed to accumulate.

## L. MAINTENANCE & CONSTRUCTION

1. Asbestos (GSS-140)

Before working on any equipment involving asbestos containing materials contact Industrial Hygiene for detailed instructions regarding proper respiratory protective equipment and safe handling methods. An example is removal of asbestos containing insulation from piping and vessels. This work should be approached as though asbestos were involved until it is definitely established otherwise.
