
COLORFUL QUIETNESS

that knows no distraction

THE *peaceful colors in this operating room* will never distract the skillful hands of the surgeon. This decorative scheme offers an excellent illustration of how hospital color problems may be effectively solved through the correct use of well-chosen tints and shades. This room also serves to emphasize *that each room in a* hospital merits individual treatment.

Each color or combination of colors should be selected because of its effect upon patients, visitors, or staff . . . or perhaps, upon all three. Dull green-grays and taupes *in brightly lighted rooms, for example,* produce restful quietness. On the other hand, certain tones of red or yellow are stimulating, serving a completely different purpose.

Careful studies on the use of color in hospitals *have been conducted by our* Department of Color Research and Decoration over a long period. This department is prepared to make recommendations based upon a thorough analysis of your particular hospital decorative problems. The service is offered without cost or obligation. Just address Department of Color *Research and Decoration in care* of our nearest branch.
