TO : Scott Tucker - JFQ

On those samples you have already received run Pydraul content determinations. Accounts from which samples were obtained include: Johnson Motors, Waukegan, Illinois;

We should soon be receiving four or five additional samples. is sampling their own effluent (three or four samples) and these should be arriving this week. I have wired John Heilala, our Pittsburgh fluids representative, who will be in contact with to replace the sample from the top flow to the holding tank.

Please place priority, Scott, on the samples from Johnson Motors. They do have an active interest for current treatment projects and they are a highly valued customer. Will look forward to your results by April 15. I am having copies of call reports on each of the above accounts forwarded to your attention. The details of the call include expected contaminants in each sample. If you have any questions please let me know.

Based on your results, Scott, we will probably want to further analyze these samples to determine the approximate level of contamination from these other chemicals (die lubes, plunger lubes, etc.) to determine the feasibility and economics of their recovery. Also, the extent of outside contaminants will directly influence the recoverability of Pydraul. In this light, please do what you can to preserve as much of the sample for further work. Thank you.

D. R. Pogue
