Cleveland Auxiliaries Research

Chicago Min. Prods. 10 December 1952

C. H. Adams

Would it be possible for you to send about five pounds of a water dispersible lithopone suitable for latex type paint to Dr. C. C. DeWitt at the following address.

201 Olds Hall
Michigan State College
East Lansing, Michigan.

Dr. DeWitt is an old friend of mine, and he dropped in today for a discussion on several subjects. He is in charge of Engineering Research at Michigan State, and has several graduate students working under his direction.

He has one student from India, who is in the Country on an educational visa. He says that this man is particularly good, and has had considerable training in X-ray diffraction and general physical chemistry. The man finishes his work at the end of the present semester which will be in March. I have asked DeWitt to talk with the man, and if he is interested to have him get in touch with us. He will be able to stay in this Country for at least two years under his present visa.
